

PAUL DENYA

Freelance Full Stack Software Engineer

pdenya@gmail.com | 925 . 481 . 4495 | Remote from Raleigh, NC

Hello!

I'm a hired gun ready to manage projects for agencies and startups.

Over the past **10 years** I've delivered loads of projects for businesses and major brands.

Production schedules are insane but **I'm here to help**. As a **full stack engineer**, I'm typically left alone with assets (PSDs + wireframes) to build with. I provide a steady flow of status updates and polished deliverables set up on your hosting.

I pride myself on overcoming hurdles on my own and taking up a bare minimum of admin hours. I'm able to be work alone or integrate with your internal or outsourced dev teams as needed.

Experience

I've delivered microsites and apps for high profile brands including Exxon, Claritin, Oppenheimer, Allure, Hyatt, Plantronics, Paypal, LiveActive, Barilla, Triscuit, Charles Schwab, Clearasil, Volvo Cars North America, Lacoste, and Dos Equis.

I've delivered features, iOS apps, browser extensions, social apps, and microsites for startups including HelloSign, PressFriendly, and Kreddos.

Skills

Expert knowledge of Ruby, Python, PHP, JavaScript, and Objective C. I've used many frameworks including Rails, Django, EmberJS, Angular, CakePHP, Symphony, and can familiarize myself with others as required.

HTML/CSS (responsive, etc.), RegEx, Bash and general server admin tasks, SQL, Database optimization, Photoshop CC (will cut and prepare assets as needed), APIs (facebook graph, twitter, google maps, stripe, paypal, youtube, and many more), Git/SVN, Scikit Learn and similar machine learning and natural language tools.

Excellent communication skills. Happy to attend meetings and explain options and limitations. I'm **calm and collected** during crunch time.

Delivered code will be well commented and maintainable.
